

## Sustainability Datasheet

Workagile is committed to offering customers sustainable solutions with as minimal environmental impact as possible.

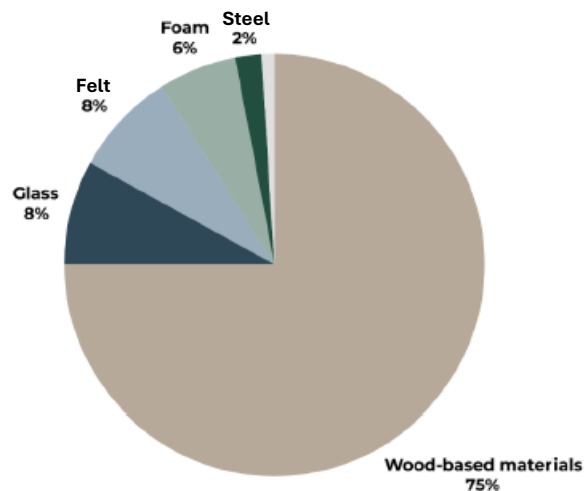

### Range Name: MiiBox

|   |   |  |   |
|---|---|--|---|
|  |  |  |  |
| Phonebooth  | Workpod   | 2 Person   | 4 Person  |

**Location of Manufacture:** Poland

**Material Breakdown:** See table below

| Material                 | Content % |
|--------------------------|-----------|
| Melamine Faced Chipboard | 75%       |
| Glass                    | 8%        |
| Felt                     | 8%        |
| Acoustic Foam            | 6%        |
| Steel & Aluminum         | 2%        |

**Material Details:**

- **Wood-based Materials:** The core structure of our booths is crafted from melamine-faced chipboard, a popular choice in furniture and interior design for its durability and aesthetic appeal. Additionally, we incorporate secondary wood-based components such as birch plywood, MDF, and beech wood to enhance the booth's quality and finish.
- **Glass:** Safety and functionality are paramount in our designs. For this reason, we utilize double-laminated 8mm glass that not only ensures safety but also offers excellent sound reduction and UV filtering capabilities. This makes it an ideal material for both privacy and environmental comfort.
- **Steel & Aluminum:** The hardware and fittings, including hinges, wheels, and corner brackets, are predominantly made from robust steel and aluminum. The use of industrial-strength neodymium magnets ensures a tight door seal to minimize sound leakage, while steel brackets contribute to the booth's structural stability and enhanced soundproofing. We are actively pursuing alternatives to reduce our use of steel and aluminum to better our environmental impact.
- **Acoustic Foam:** Our booths are lined with acoustic foam made from regenerated PUR foam, known for its superior sound insulation, durability, and lightweight. Importantly, this material is 100% recyclable, aligning with our commitment to sustainability.
- **Felt:** For the interior, we use 100% PP felt, chosen for its high resistance to wear and tear and ease of maintenance, and is 100% recyclable.

**Circularity Details:**

| Circularity  | %  |
|--|----|
| Recycled Content % (Used in production)                          | 80 |
| Renewable Content %  | 90 |
| Recyclable Content % (Can be recycled after end of product life) | 90 |
| VOC of Product   | 0  |

**Other Notes:**

- Product can be dismantled, and parts can be repaired and/or replaced, to increase the lifespan of the product.
- Workagile is FSC and PEFC accredited as well as holding 15014001 & FISP certifications. This is evidence of our commitment to responsibly sourcing materials and quality, as well as being environmentally responsible.
